

Data Deep Dive

Educators Grades K-5, 6-8

Session Objectives

In this session, participants will:

-  refine weekly and Zearn time data routines to keep students on track to complete 3 grade-level lessons each week
-  analyze their class data to identify and plan class-level celebrations and adjustments
-  examine their student-level data generated during Zearn time to identify and plan support for individual students
-  practice maintaining a coherent learning experience between live instruction and digital learning

NOTE: This 90-minute session is intended for educators who have been trained on Zearn Math. Participants will use their own implementation data during this session.

Session Overview

Data Deep Dive (90 minutes)

During this session, participants will:

- deepen understanding of what strong implementation looks like in a given week and during Zearn Math time
- ask and answer questions within their data to determine if students are on track to complete 3 lessons
- plan strong actions that follow data review, using their own data
- identify where their curriculum maps to Zearn Math to ensure students' Zearn Math placement complements their live instruction
