

Join the South Carolina Math Challenge

South Carolina Math Challenges are ready-to-use, printable kits that celebrate student progress while reinforcing Zearn Math lesson goals.

Launch challenges throughout the year

Kits are available year-round on the Zearn website, making it easy for school leaders and teachers to launch a series of one-month challenges. Each challenge supports your students' goal of completing at least three grade-level Zearn Math lessons a week, helping them progress toward 90 lessons by year's end. School leaders can monitor schoolwide progress using the Admin Snapshot Report, and teachers can monitor student progress using the Class Snapshot Report.

Many schools follow a suggested sequence:

Your school can choose to do all four challenges or select individual ones that align with your academic calendar. Either way, each challenge strengthens momentum in math learning and celebrates student progress at every step!

What's included in each kit

Each kit includes downloadable, customizable materials your team can print, cut out, and bring to life:

Printable bulletin board cutouts to show school and classroom progress

Printable student lesson trackers to individually measure progress

Printable certificates to recognize growth

Family flyers (in English and Spanish) to engage caregivers

Share your school's math progress

Once your school kicks off a challenge, help amplify the celebration! Share photos and updates on social media to inspire other schools and highlight student success to their families. Be sure to tag Zearn so we can cheer you on and showcase your story to the Zearn teacher community nationwide.
